

Changing the Name Server Records to point to Joomla Wired?

Written by Joomla Wired

If you have purchased a domain through someone else you need to change the primary and secondary nameserver records:

- NS1.JOOMLAWIRED.COM
- NS2.JOOMLAWIRED.COM

This allows our servers to control essential settings which allows your customers to see your website and for them to be able to email you. Remember you also need to tell our servers via cpanel that the domain belongs to you otherwise it will not work. To do this please [click here](#) to read the FAQ.
